

Infiltrating Load Bearing Soil for Turf

Stone Soccer Stadium
Furman University

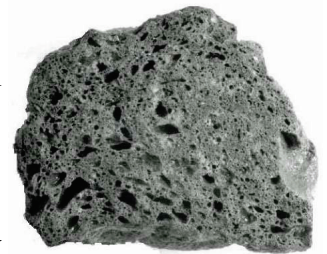

Stalite PermaTill® Structural Soil for Turf and Firelanes is designed to withstand severe soil compaction and support the weight of heavy equipment; this customized blend of PermaTill® expanded slate aggregate and approved sandy loam serves situations such as natural service or fire lanes, grass parking areas and athletic or recreational turf while creating an air-entrained environment for root development.

Inn on Biltmore Estate

High Compressive Strength
CEC 26.9 me/100g increases
filtration & nutrient retention

High permeability with
moisture retention for
enhanced hydro-conductivity

Additional Sustainable Applications with Stalite PermaTill Expanded Slate Products:
www.permatill.com 877-737-6284

Bioretention • Constructed wetlands • On-site wastewater treatment • Greenroof • Structural soil for urban trees
 Geotechnical fill • Root bridging for protecting existing trees
 Compaction reduction for poor soils • Fireproof, durable mulch and pathways
